Installation Manual
for the

MIGHTY MULE
E-Z GATE OPENER

Automatic Gate Opener System
FOR DUAL SWING GATES

⚠️ WARNING! ⚠️

This equipment is similar to other gate or door equipment and meets or exceeds Underwriters Laboratory Standard 325 (UL 325). However, gate equipment has hazards associated with its use and therefore by installing this product the installer and user accept full responsibility for following and noting the installation and safety instructions. Failure to follow installation and safety instructions can result in hazards developing due to improper assembly. You agree to properly install this product and that if you fail to do so GTO, Inc. shall in no event be liable for direct, indirect, incidental, special or consequential damages or loss of profits whether based in contract tort or any other legal theory during the course of the warranty or at any time thereafter. The installer and/or user agree to assume responsibility for all liability and use of this product releasing GTO, Inc. from any and all liability. If you are not in agreement with this disclaimer or do not feel capable of properly following all installation and safety instructions you may return this product for full replacement value.

READ ALL INSTRUCTIONS CAREFULLY AND COMPLETELY before attempting to install and use this automatic gate opener. This gate opener produces a high level of force. Stay clear of the unit while it is operating and exercise caution at all times.

All automatic gate openers are intended for use on vehicular gates only.

This product meets and exceeds the requirements of UL 325, the standard which regulates gate opener safety, as established and made effective March 1, 2000, by Underwriters Laboratories Inc.

©2000 GTO, Inc.
The Mighty Mule Gate Opener® is intended for use with vehicular swing gates. The opener can be used in Class I, Class II and Class III applications.

VEHICULAR GATE OPENER CLASS CATEGORIES

Residential Vehicular Gate Opener-Class I: A vehicular gate opener (or system) intended for use in a home of one-to-four single family dwelling, or a garage or parking area associated therewith.

Commercial/General Access Vehicular Gate Opener-Class II: A vehicular gate opener (or system) intended for use in a commercial location or building such as a multifamily housing unit (five or more single family units), hotel, garages, retail store, or other building servicing the general public.

Industrial/Limited Access Vehicular Gate Opener–Class III: A vehicular gate opener (or system) intended for use in an industrial location or building such as a factory or loading dock area or other locations not intended to service the general public.

Restricted Access Vehicular Gate Opener–Class IV: A vehicular gate opener (or system) intended for use in a guarded industrial location or building such as an airport security area or other restricted access locations not servicing the general public, in which unauthorized access is prevented via supervision by security personnel.

PLEASE READ THIS FIRST!

Thank you for purchasing a Mighty Mule Gate Opener®—GTO’s “do-it-yourself” automatic gate opener! When correctly installed and properly used, your Mighty Mule Gate Opener® will give you many years of reliable service. Please read the following information and watch the enclosed videotape to ensure you have the correct system for your particular needs. Furthermore, this manual and the videotape will enable you to properly install your Mighty Mule Gate Opener®.

The Mighty Mule Gate Opener® is designed for installation on a pull-to-open dual leaf gate (gates that open into the property). Using an accessory kit, the Mighty Mule Gate Opener® can accommodate a push-to-open dual leaf gate (gates that open out from the property). The gate must not exceed 16 feet in length nor weigh more than 350 pounds (please see Technical Specifications on page 10). The Mighty Mule Gate Opener® can be used on vinyl, aluminum, chain link, farm tube, and wrought iron gates. Use on solid (wood) gates is not recommended. Solid surface gates have a high resistance to the wind; if the wind is strong enough, the opener will obstruct and stop.

The Mighty Mule Gate Opener® accommodates extra transmitters, digital keypads, solar panels, push buttons, automatic gate locks, and other access control products. These optional accessories (see the enclosed Mighty Mule Accessory Catalog) are available at most stores. Your store should be able to special order any accessory not in stock. If your store cannot special order accessories, please call the GTO Sales Department.

The Mighty Mule Gate Opener® features adjustable obstruction sensing. This safety feature makes the gate stop and reverse direction for 2 seconds when it comes in contact with an obstruction. MIN is the factory setting; meaning the gate will exert the minimum force on an obstruction before it stops and reverses direction.

The Mighty Mule Gate Opener® also has an adjustable auto-close feature. After the gate reaches the fully open position, it can be set to remain open for 1 to 120 seconds before automatically closing. Pressing the transmitter button at any time after the gate opens fully will cause it to close immediately. OFF is the factory setting; meaning the gate will stay open until you press the transmitter (or keypad, etc.) again.

PLEASE NOTE—If your application requires any of the following:

- Swing gates longer than 16 feet or weighing more than 350 pounds;
- Slide gates;
- Heavy duty or commercial uses;
- Professional installation;

please call GTO at (800) 543-GATE [4283] or (850) 575-0176 for information about our GTO/PRO professional line of gate openers and accessories. Our Sales Department will be glad to give you the name and phone number of a GTO/PRO dealer near you.

BEFORE YOU BEGIN TO INSTALL YOUR AUTOMATIC GATE OPENER:
watch the enclosed videotape and read these instructions carefully and completely to become familiar with all parts and installation steps.
Because automatic gate openers produce high levels of force, consumers need to know the potential hazards associated with improperly designed, installed, and maintained gate opener systems. *Keep in mind that the gate opener is just one component of the total gate operating system.* Each component must work in unison to provide the consumer with convenience, security, and safety.

This manual contains various safety precautions and warnings for the consumer. Because there are many possible applications of the gate opener, the safety precautions and warnings contained in this manual cannot be completely exhaustive in nature. They do, however, provide an overview of the safe design, installation, and use of this product. **CAREFULLY READ AND FOLLOW ALL SAFETY PRECAUTIONS, WARNINGS, AND INSTALLATION INSTRUCTIONS TO ENSURE THE SAFE SYSTEM DESIGN, INSTALLATION, AND USE OF THIS PRODUCT.**

Precautions and warnings in this manual are identified with this ⚠️ warning symbol. The symbol identifies conditions that can result in damage to the opener or its components, serious injury, or death.

Because GTO automatic gate openers are *only part* of the total gate operating system, it is the responsibility of the consumer to ensure that the total system is safe for its intended use.

---

### To Manually Open and Close the Gate, Follow the Procedure Below:

#### Disconnecting the Openers

1. Turn control box power switch **OFF**.
2. Remove hairpin clip, clevis pin, and washer from front mount.
3. Pull front mount away from gate bracket.

Repeat steps 1 – 3 for the second opener

*Your dual gate can be opened and closed manually when the openers are disconnected.*

#### NOTE: Substitute Pin Locks for the clevis pins to prevent unauthorized removal of the openers from the gate (see Accessory catalog).
IMPORTANT SAFETY INSTRUCTIONS

For The Consumer

WARNING: To reduce the risk of injury or death:

1. READ AND FOLLOW ALL INSTRUCTIONS. Failure to meet the requirements set forth in the instruction manual could cause severe injury and/or death, for which the manufacturer cannot be held responsible.

2. When designing a system that will be entered from a highway or main thoroughfare, make sure the system is placed far enough from the road to prevent traffic congestion.

3. The gate must be installed in a location that provides adequate clearance between it and adjacent structures when opening and closing to reduce the risk of entrapment. Swinging gates must not open into public access areas.

4. The gate and gate opener installation must comply with any applicable local codes.

I. Before Installation

1. Verify this opener is proper for the type and size of gate, its frequency of use and the proper class rating.

2. Make sure the gate has been properly installed and swings freely in both directions. Repair or replace all worn or damaged gate hardware prior to installation. A freely moving gate will require less force to operate and will enhance the performance of the opener and safety devices used with the system.

3. Review the operation of the system to become familiar with its safety features. Understand how to disconnect the opener for manual gate operation (see page 1).

4. This gate opener is intended for vehicular gates ONLY. A separate entrance or gate must be installed for pedestrian use (see page 6).

5. Always keep people and objects away from the gate and its area of travel. NO ONE SHOULD CROSS THE PATH OF A MOVING GATE.

6. Pay close attention to the diagram below and be aware of these areas at all times.

- ZONE 1
- ZONE 2
- ZONE 3
- ZONE 4
- ZONE 5

Driveway

- Gate in the Open Position
IMPORTANT SAFETY INSTRUCTIONS

Entrapment Zones:
Zone 1 – leading edge of the gate and the fence post.
Zone 2 – between the gate and the gate post
Zone 3 – the path of the gate
Zone 4 – the space between the gate in the open position and any object such as a wall, fence, tree, etc.
Zone 5 – pinch points between the opener and gate or post

II. During Installation

1. Install the gate opener on the inside of the property and fence line. **DO NOT** install an opener on the outside of the gate where the public has access to it.

2. Be careful with moving parts and avoid close proximity to areas where fingers or hands could be pinched.

3. Devices such as safety edges and photo beams provide additional protection against entrapment (see page 5).

4. If push buttons or key switches are installed, they should be within sight of the gate, yet located at least 10 feet from any moving part of the gate (see diagram below). **Never install any control device where a user will be tempted to reach through the gate to activate the gate opener.**

5. Do not activate your gate opener unless you can see it and can determine that its area of travel is clear of people, pets, or other obstructions. Watch the gate through its entire movement.

6. Secure outdoor or easily accessed gate opener controls in order to prohibit unauthorized use of the gate.
III. After Installation

1. Attach the warning signs *included* to each side of the gate to alert the public of automatic gate operation. It is your responsibility to post warning signs on both sides of your gate. If any of these signs or warning decals become damaged, illegible or missing, replace them immediately. Contact GTO for free replacements.

2. The gate is automatic and could move at any time, posing a serious risk of entrapment. No one should be in contact with the gate when it is moving or stationary.

3. Do not attempt to drive into the gate area while the gate is moving; wait until the gate comes to a complete stop.

4. Do not attempt to "beat the gate" while the gate is closing. This is extremely dangerous.

5. Do not allow children or pets near your gate. **Never let children operate or play with gate controls.** Keep the remote controls away from children and unauthorized users; store controls where children and unauthorized users do not have access to them.

6. **KEEP GATES PROPERLY MAINTAINED.** Always turn power to opener OFF before performing any maintenance. Clean the push-pull tube with a soft, dry cloth and apply silicone spray to it at least once per month.

7. Service the gate and gate opener regularly. Grease hinges, spray push pull tube with high quality silicon spray and replace the battery every two (2) years.

8. To operate this equipment safely, YOU must know how to disconnect the opener for manual gate operation *(see page 1)*. If you have read the instructions and still do not understand how to disconnect the opener, contact the GTO Service Department.

9. Disconnect the opener **ONLY** when the power is TURNED OFF and the gate is **NOT** moving.

10. Make arrangements with local fire and law enforcement for emergency access.

11. Distribute and discuss copies of the **IMPORTANT SAFETY INSTRUCTIONS** section of this manual with all persons authorized to use your gate.

12. **IMPORTANT: Save these safety instructions.** Make sure everyone who is using or will be around the gate and gate opener are aware of the dangers associated with automated gates. In the event you sell the property with the gate opener or sell the gate opener, provide a copy of these safety instructions to the new owner.

Should you lose or misplace this manual, a copy can be obtained by downloading one from the Mighty Mule web site (www.mightymule.com), by contacting GTO, Inc., at 3121 Hartsfield Road, Tallahassee, Florida 32303 or by calling 1-800-543-4283 and requesting a duplicate copy. One will be provided to you free of charge.

**IMPORTANT SAFETY INSTRUCTIONS**

**Secondary Means of Protection Against Entrapment**

As specified by Gate Operator Safety Standard, UL 325 (30A.1.1), automatic gate openers shall have *provisions for, or be supplied with*, at least one independent primary and one independent secondary means to protect against entrapment. The Mighty Mule utilizes **Type A**, an inherent (i.e., built-in) entrapment sensing system as the *primary* type of entrapment protection. Also, the Mighty Mule has *provisions for* the connection of **Type B2** protection to be used as the *secondary* type of entrapment protection, if desired.

1. For gate operators utilizing a contact sensor (e.g., safety edge sensor– **Type B2**) in accordance with UL 325 (51.8.4 [i]):

   A. One or more contact sensors shall be located at the leading edge, bottom edge, and post edge, both inside and outside of a vehicular swing gate system.
   
   B. A hard wired contact sensor shall be located and its wiring arranged so that the communication between the sensor and the gate opener is not subjected to mechanical damage.
   
   C. A wireless contact sensor such as one that transmits radio frequency (RF) signals to the gate opener for entrapment protection functions shall be located where the transmission of the signals are not obstructed or impeded by building structures, natural landscaping or similar obstruction. A wireless contact sensor shall function under the intended end-use conditions.

---

**ENTRAPMENT ALARM (UL 325; 30A.1.1A)**

The Mighty Mule Gate Opener® is designed to stop and reverse approximately 2 seconds when the gate comes in contact with an obstruction or when an object activates the non-contact sensors. Additionally, these openers are equipped with an **audio entrapment alarm** which will activate if the unit obstructs *twice* while opening or closing. This alarm will sound for a period of 5 minutes, or until the opener receives an intended signal (e.g., from a transmitter) and the gate returns to a fully open or fully closed position.
IMPORTANT SAFETY INSTRUCTIONS

Required Safety Precautions for Dual Gates

Install Warning Signs

**Warning signs** alert people of automatic gate operation and are **recommended** when installing the Mighty Mule Gate Opener. Furthermore, a walk-through gate must be installed if pedestrian traffic is expected near the vehicular gate. We recommend using the GTO Bulldog Pedestrian Gate Lock (Call the GTO Sales Department) for controlled access.

![Diagram of gate system with warning signs and sensors]

**Entrapment Protection**

Inherent obstruction settings, even when properly adjusted, may not be sensitive enough to prevent bodily injury in some circumstances. For this reason, safety devices such as safety edge sensors (or photoelectric sensors), which stop and reverse gate direction upon sensing an obstruction, are suggested for augmented protection against entrapment.

**Warning Signs**

The warning signs (at right) must be installed on both sides of each gate leaf (see page 7 for details).
IMPORTANT SAFETY INSTRUCTIONS

These warning labels should be found at the locations specified below. If any of them are missing, immediately contact GTO for replacements.

**WARNING**

**Moving Gate Can Cause Injury Or Death**

1. KEEP CLEAR! Gate may move at any time.
2. Do not allow children to operate gate or play in gate area.
3. This gate is for vehicles only. Pedestrians must use a separate entrance.

**WARNING**

**MOVING GATE Can Cause Injury or Death**

1. KEEP CLEAR! Gate may move at any time.
2. Do not allow children to operate gate or play in gate area.
3. This gate is for vehicles only. Pedestrians must use a separate entrance.

**GTO Series**

Conforms to UL 325 STANDARDS

Maximum Gate: 500 lb. (226.7 kg); 16 ft. (4.8 m)
Voltage: 12 Vdc; Frequency: 0 Hz; Power: 41.4 W
Class I, II and III Vehicular Swing Gate Operator.
Serial Number: 1000-xxxxxxx

**WARNING**

**GTO • 1000 Series**

Conforms to UL 325 STANDARDS

Maximum Gate: 500 lb. (226.7 kg); 16 ft. (4.8 m)
Voltage: 12 Vdc; Frequency: 0 Hz; Power: 41.4 W
Class I, II and III Vehicular Swing Gate Operator.
Serial Number: 1000-xxxxxxx

**TO MANUALLY OPEN AND CLOSE THE GATE:**

1. Turn control box power switch OFF.
2. Disconnect front mount from gate bracket.
3. Pull front mount away from gate bracket.

Disconnect operator ONLY when the control box power switch is OFF and the gate is NOT moving.

GTO, Inc. Tallahassee, Florida USA

**Listed**

USC product identification and manual operation instruction label (1) installed on control box cover
Dual Gate Opener Parts List
Opener and Mounting Hardware

Opener and Mounting Hardware

- 4 1/2" x 4 1/2" Setback Template (1)
- 40' Power Cable (1)
- 4 1/2" Power Cable (1)
- Gate Opener (2)
- Gate Bracket (2)
- Post Bracket (4)
- Post Pivot Bracket (2)
- Closed Position Stop Plate (2)
- Installation Video (1)
- 8" Nylon Cable Tie (20)
- Strain Relief (1)
- Customer Support Card (1)

Hairpin Clip (4)

3/8" x 1-1/8" Clevis Pin (4)

3/8" x 1/8" Bolt (8)

3/8" x 3" Bolt (4)

3/8" x 2" Bolt (2)

5/16" x 1-3/4" Bolt (2)

3/8" Washer (18)

3/8" Lock Washer (14)

5/16" Washer (2)

3/8" Nut (14)

5/16" Nut (2)

2" Receiver Mounting Screw (4)
Tools Needed

- Power Drill
- Open End Wrenches — 3/8", 7/16", 1/2", and 9/16"
- 3/8" Drill Bit
- Hacksaw or Heavy Duty Bolt Cutters
- Slotted (Flat Bladed) Screwdriver
- Phillips Screwdriver
- Tape Measure
- Level
- Wire Strippers
- C-Clamps — small, medium, and large

Also, you will need these items before you begin the installation (Some of these items can be found in the Accessory Catalog on page 38):

- Additional **low voltage wire** will be needed; length depends upon the distance between the transformer power supply and the control box. See **Powering the System** on page 26, and the Accessory Catalog.

- If your dual gate is more than 1000' away from an ac power source you will need to use at least two **Mighty Mule Solar Panels** to trickle charge the battery. See the Accessory Catalog.

- Depending on the type of gate, a **horizontal cross member or mounting plate may be needed** to mount the front of the opener and gate bracket to the gate. See page 11, step 2; page 15, step 10.

- If your fence posts are made of wood and are less than 6" in diameter or 6" square, see page 12.

- If you have thin walled tube or panel gates, see **Recommended Reinforcement Examples** on page 12.

- If your fence posts are larger than 6" in diameter you will need **threaded rods or carriage bolts longer than 8"**. See page 15.

- Both gate leaves need a **stop post** for the open position. These posts are not provided. See **Installation of the Positive Stops** on page 17 for more information.
**Technical Specifications**

**MIGHTY MULE GATE OPENER**

**DRIVE**
- Low friction screw drive (linear actuator) rated for −30 °F to +200 °F (−34 °C to +93 °C).
- Powered by a 12 V motor with integral case hardened steel gear reducer. Motor speed reduced to 220 rpm. Generates 330 ft. lb. of torque at 12 V.
- Opening arc: minimum 80º to maximum 110º. Approximate opening time (90º): 15 to 17 seconds, depending on weight of gate.

**POWER**
- The system is powered by a 12 VDC, 7.0 Ah, sealed, rechargeable lead acid battery.
- Battery charge is maintained by a 120 VAC, 18 VAC output transformer rectified to 14.5 VDC (20 VA) through the GTO control board. Two (2) blade-style control board fuses are rated for 15 A.
  
  **NOTE:** The transformer should not be directly connected to any battery. Do not replace fuses with higher ampere rated fuses; doing so will void your warranty and may damage your control board.
- Battery charge is maintained by GTO Solar Panel Charger: float voltage of 14.5 VDC output from a 193/8” x 8 1/2” silicon alloy panel. Generates 5 W at 300 mA. A gated diode on the control board prevents battery discharge.

**CONTROL**
- GTO microprocessor-based control board is set for pull-to-open gate installations. DIP switches can be adjusted to accommodate an optional kit for push-to-open gates (see Accessory Catalog).
- Control board has temperature compensated circuits.
- A circuit on the control board regulates charging. "Sleep draw" is 40 mA; "active draw" is 2 to 5 A.
- Auto-memorization of digital transmitter code.
- GTO remote-mounted RF receiver tuned to 318 MHz.
- Limit controls are mechanical. Adjustable range of push-pull tube is 7 1/2" to 11 1/2". Opener length with push-pull tube fully retracted is 33 3/4", mounting point to mounting point.
- Adjustable auto-close timer (OFF to 120 s), inertia, and obstruction sensitivity using three (3) potentiometers.
- Power terminal block accommodates a transformer and solar panels.
- DIP switches simplify setup of gate opener.
- Accessory terminal block fully compatible with push button controls, digital keypads, safety loops, etc.
- Control board allows connection of safety edge sensors and photoelectric sensors.
- Audio entrapment alarm sounds if unit encounters an obstruction twice while opening or closing.

**OPERATIONAL CAPACITY**
- Depending upon the length of the gate leaves and the number of operational cycles per day, the Mighty Mule Gate Opener® can open dual gates weighing up to 350 lb. per leaf—if all installation procedures have been properly followed. Ball bearing hinges should be used on all gate leaves weighing over 250 lb.

<table>
<thead>
<tr>
<th>Gate Capacity Chart (estimated number of cycles based on use with a transformer)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gate Length (per gate leaf)</td>
</tr>
<tr>
<td>16 ft.</td>
</tr>
<tr>
<td>14 ft.</td>
</tr>
<tr>
<td>12 ft.</td>
</tr>
<tr>
<td>3.5-10 ft.</td>
</tr>
</tbody>
</table>

**NOTE:** An operation cycle is one full opening and closing of the gate. The numbers shown in this chart are for single gate applications. Cycles for dual gate applications will be about half of those with a single gate.

To determine the number of cycles the gate opener will perform using solar panels, please see the specifications listed on page 26 or call (800) 543-GATE (4283) or (850) 575-0176 for more information.

These specifications are subject to change without notice.
Installation Overview

Pull-to-Open Dual Gate (Gate Opens into the Property)

The diagram shown below is an example of a pull-to-open installation on a chain link fence and dual gate. Mounting the openers on masonry columns requires special procedures; see Column Installation Information on page 37 if you intend to mount the openers on columns. Furthermore, if you have a push-to-open dual gate, you will need to purchase two (2) push-to-open brackets (see Accessory Catalog) to properly configure your system. See Push to Open Installation on page 32 before proceeding.

Preparation of the Gate Leaves

Step 1
The gate leaves must be plumb, level, and swing freely on their hinges. Wheels must not be attached to the gate. The gate must move throughout its arc without binding or dragging on the ground. Note that gate leaves weighing over 250 lb. should have ball bearing hinges with grease fittings.

Step 2
The fence posts must be secured in the ground with concrete so they will not twist or flex when the openers are activated. Be sure to position the openers near the centerline of the gate to keep the gate from twisting and flexing. The addition of a horizontal or vertical cross member (if one is not already in place) to provide a stable area for mounting the gate bracket is also important.
Installation of Mounting Hardware

The position of the post bracket determines the leverage and efficiency of the opener. The post bracket position also sets the clearance between the opener and gate in the open and closed positions.

The curved design of the post bracket works well for installations on round and square fence posts. Because the post bracket carries the entire thrust of the active opener, bolts that completely penetrate the fence post must be used.

On wooden posts, place a metal plate or washer \textit{(not supplied)} between the nuts and the fence post to prevent the thrust of the opener from pulling the bolts and washers out of the wood.

\textbf{NOTE:} A fence post smaller than 6" in diameter or 6" square should be made of metal instead of wood so that it will remain stable while the opener is moving the gate.

On round posts of 6" diameter or larger, the post pivot bracket may not be necessary for the installation. In this instance, the two post brackets are mounted by themselves.

\textbf{IMPORTANT:}
We \textbf{strongly recommend} using steel pipe, wood or metal to reinforce thin walled tube gates or wood to reinforce panel gates as shown. These reinforcement methods will prevent damage to the opener and gate when the opener is installed.

Because the size tube gates vary, it is impossible to provide the appropriate reinforcement material for every application. If you are unable to locate suitable reinforcement materials, call GTO sales at 1-800-543-4283.

\textbf{Recommended Reinforcement Examples}
Determining the Mounting Position of the Post Bracket Assembly and the Gate Bracket

Step 3
Insert the 3/8" x 2" bolt through the center hole of the post brackets and post pivot bracket as shown. Fasten a 3/8" washer, lock washer and nut on the end of the bolt. DO NOT overtighten the nut because the post pivot bracket will have to be adjusted later.

Step 4
Attach post bracket assembly and gate bracket to the opener with the clevis pins and washers. Secure the clevis pins with hairpin clips.

Step 5
With the gate leaf in the full open position (80° to 110° from its closed position), adjust the post bracket assembly and gate bracket until the opener is level. While holding the opener level, use C-clamps to temporarily keep the post bracket assembly and gate bracket in their respective positions on the fence post and gate leaf.

NOTE: The following steps are intended for pull-to-open dual gate installations. If you are mounting your opener on a push-to-open dual gate (e.g., a gate on a sloped driveway) you will need to purchase two (2) Push To Open brackets (see Accessory catalog). Also, see Push-to-Open Installation beginning on page 32.
Step 6
Study the 4 1/2" x 4 1/2" setback template (see insert) provided with this manual. Once you are familiar with its illustrations, cut and save the template from the insert. The template will determine the correct position of the post pivot bracket before mounting the opener on the fence post.

Remove hairpin, clevis pin, and washer from front mount and close the gate. Rest disconnected opener on cross member of gate. Stand inside property next to fence post and place one end of template over center of gate hinge. Place the other end of template over the post pivot bracket hole (either of the two mounting holes in post pivot bracket can be used) where the opener will be attached. Be sure to hold the template at a 90° angle between these two points and measure 4 1/2" back from the center of the gate hinge. You will need to rotate the post pivot bracket or the entire post bracket assembly to align it with the square angle of the template. THE ANGLE BETWEEN THE GATE HINGE AND THE POST PIVOT BRACKET MUST MATCH THE ANGLE OF THE SETBACK TEMPLATE.

NOTE: If you move the post pivot bracket, be sure one of the post bracket holes is aligned with the rest of the assembly (the center hole should already have a bolt through it). The post pivot bracket can be flipped over to give more position options.

After verifying that you have complied with the 4 1/2" x 4 1/2" setback, insert the 5/16" x 1 3/4" bolt through the aligned holes of the post bracket and post pivot bracket (illustrated below) and fasten it with the 5/16" washer and nut.

IMPORTANT: If you loosened the clamp on the post bracket to achieve the 4 1/2" x 4 1/2" setback, tighten it in its new position and recheck the gate bracket with the gate in the open position (move the gate bracket and re-clamp it if necessary).

Examples of a 4 1/2" x 4 1/2" Setback

Verify the Position of the Gate Bracket and Post Bracket Assembly:
With the gate in the open position, make sure the following conditions are met:

1. The opener is level.
2. The 4 1/2" x 4 1/2" setback measurement is correct (Step 6).
3. There is sufficient clearance between opener and gate in the open and closed positions.
Installing the Post Bracket Assembly and Gate Bracket

Step 7
Mark reference points for bolt holes on the fence post through middle of bracket slots. Marking reference points in this manner allows room for adjustment when mounting the post bracket assembly and gate bracket. After marking your reference points, remove the opener and brackets from the fence and gate.

Step 8
Drill 3/8" holes into fence post as marked.

Step 9
Fasten post bracket assembly to the fence post using (4) 3/8" x 8" bolts, washers, lock washers, and nuts (provided). Remove excess bolt length extending beyond the tightened nuts with a hacksaw or bolt cutters.

**NOTE:** In cases where the fence post has a diameter larger than 6", **threaded rods or carriage bolts longer than 8" (not supplied)** must be used.

Step 10
Mark reference points for bolt holes on the gate cross member through middle of gate bracket slots. Drill 3/8" holes into the gate cross member as marked.

Mount gate bracket using (2) 3/8" x 3" bolts, washers, lock washers, and nuts (provided). Cut off excess bolt length extending beyond the tightened nuts.

Gate Bracket Mounting Examples
Mounting the Opener

Step 11
Attach the opener to the securely bolted post bracket assembly and gate bracket using clevis pins, washers, and hairpin clips, or optional Pin Locks (see Accessory Catalog). Verify that the opener is level and adjust the post bracket assembly if necessary.

Mounting the Second Opener

Step 12
Mount the second opener on the remaining gate leaf by repeating Step 3 through Step 11, starting on page 13. After you have mounted the second opener, proceed to Step 13 on the next page.
Installation of the Positive Stops

The Mighty Mule Gate Opener® firmly holds the gate in the open and closed positions against the positive stops. The positive stops form the boundaries of the gate operating arc and help stabilize the gate leaves. Furthermore, stable gate leaves help to maintain the long life of your automatic gate opener system. To further enhance stability and security, we strongly recommended using an optional Mighty Mule Automatic Gate Lock® (see Accessory Catalog) with your dual gate.

IMPORTANT: You need to determine which side of the driveway you will mount the control box. From this point on the gate and gate opener on the same side as the control box will be referred to as the MASTER or FIRST gate and gate opener. The gate and gate opener on the opposite side of the driveway from the control box will be referred to as the SLAVE or SECOND gate and gate opener.

Step 13
Open position stops are required for both gate leaves (see illustration at right).

With the gate leaf at its maximum open position, measure the distance from the gate hinge to the end of the leaf. At approximately $2/3$ of this distance (using the hinge as your starting point), place a mark on the ground directly under the gate leaf. Install the open position stop at this mark (see illustration). The open position stop post may be made of wood, metal, or concrete and should be firmly secured in the ground (we recommend setting it in concrete). When the open position stop post is in the ideal position, the gate leaf will strike the post just as the opener motor shuts down. Repeat this step for the other gate leaf.

![Illustration A](image)

Step 14
Attach a vertical closed position stop plate to the SLAVE or SECOND gate.

Remove hairpin clip, clevis pin, and washer from front mount and close the gate leaf (remember to support opener). The stop plate needs to be positioned near the end of the gate as shown in Illustration A. Position this closed position stop plate vertically and fasten it to the inside bottom (i.e., SLAVE opener side) of the gate frame, but do not tighten it completely. NOTE: For a push-to-open installation (gate opens out from the property) attach the closed position stop plate to the outside of the gate.

Step 15
Install a low profile ground stop (not provided) beneath the SLAVE gate stop plate.

The low profile ground stop may be made of metal or concrete and should be firmly secured in the ground (we recommend setting it in concrete). You must slide the closed position stop plate toward the ground stop until they touch (see Illustration B at right and the overview illustration on page 18). Once you have moved the stop plate to the correct position, tighten its hardware completely.

![Illustration B](image)
**Step 16**
Attach the remaining closed position stop plate to the FIRST gate leaf.

Remove hairpin, clevis pin, and washer from front mount and close the gate leaf. Fasten this *closed position stop plate (horizontally)* to the end of the gate frame on the *gate centerline*, but do not tighten it completely. Slide the stop plate toward the frame of the SECOND gate leaf until they touch (*see illustration at right*). Once you have moved the stop plate to the correct position, tighten its hardware completely.

Use the appropriate hardware for your type of gate (use U-bolts if you have a tube or chain link gate; wood or lag screws for wood gates; etc.). This hardware is not provided.

---

**At this stage of the installation, the openers should be installed on the gate leaves and the open and closed position stops should be in place.**

**Check List**

- The gate leaves are plumb, level, and swing smoothly on their hinges.
- After measuring with the 4 1/2” x 4 1/2” setback template, the post bracket assemblies were bolted to the fence posts.
- Plates or other supports were added for the gate brackets (if necessary).
- The openers are level and mounted on the centerline of the gate.
Mounting the Control Box

**Step 17**
Remove the four thumb screws from the control box cover and remove the cover. Use a screwdriver or steel punch to **carefully** remove the thin plastic knockout disk (*see illustration at right*) from the second opener power cable hole at the bottom of the control box.

⚠️ **Be careful to avoid contact or damage to the control board with tools.**

Use a sharp knife or deburring tool to clean the rough edges from the hole.

**Step 18**
The strain relief for the first opener power cable comes from the factory installed. The second power cable strain relief will be installed the same way. Unscrew and remove the lock nut from the strain relief (*included with hardware*). From the outside of the control box, insert the strain relief hub and sealing nut (*see illustration right*) into the **new strain relief hole**. Finger tighten the lock nut onto the threaded end of the strain relief hub from inside the box.

**Step 19**
Mount the control box using the nylon cable ties (*provided*) or another secure method. The **control box must be mounted at least 3 feet above the ground** to protect it from rain splash, snow, etc., and at least 3 feet from an ac power source to prevent electrical interference.

**Step 20**
Make sure the control box power switch is in the **OFF** position. Slide the battery into position with its terminals to the **left** (*see illustration*). Push battery down until it fits snugly in control box. Connect the **BLACK** battery wire to the **NEGATIVE (–)** battery terminal. Connect the **RED** battery wire to the **POSITIVE (+)** terminal.

⚠️ **Pay close attention to the color of the wires. If the wires are connected incorrectly, the control board will be damaged.**

⚠️ **NEVER** insert the battery with the terminals to the right!

**HINT:** A dab of household petroleum jelly on the battery terminals will help prevent corrosion.
Connecting Opener Power Cables

**First Opener**

**Step 21**
Strip approximately 3/16" of insulation from each wire of the 4 1/2 foot power cable. Twist each exposed wire tightly (there are five [5] wires inside the power cable sheath). Loosen the sealing nut on the left strain relief and insert the power cable into control box through this strain relief. Thread approximately 4" of the power cable into control box. Retighten strain relief (on the **black sheath** of the power cable) until the power cable locks into place.

**Step 22**
Insert the stripped wires of the 4 1/2 foot power cable into the appropriate terminals on the **FIRST OPERATOR** terminal block. The green wire should be inserted into the **GRN** terminal, the blue wire into **BLU**, the orange wire into **ORG**, black wire into **BLK**, and the red wire into the **RED** terminal.

Tighten the set screws against the end of the wires. A dab of petroleum jelly on each terminal will help prevent corrosion.

**Second Opener**

**Step 23**
Review the **Installation Overview** illustration on page 11 before proceeding.

Cut a slot into the driveway to accommodate PVC conduit (**not provided**). The buried conduit will protect the 40 foot power cable from automobile tires, lawn mower blades, weed eaters, and grazing animals. Pull the 40 foot second opener power cable through the conduit and lay them into the slot in the driveway.
Mounting the Receiver

Consider the following when mounting the receiver:

- Standard receiver cable length is 10 feet (receivers with a longer cable are available as special order items; call the GTO Sales Department). NEVER splice receiver cable!
- Run the cable through PVC conduit to protect it from damage.
- DO NOT run cable through metal conduit because the receiver signal range will be decreased.
- DO NOT run cable in conduit containing AC wiring.
- DO NOT mount receiver on a metal fence or post; doing so will decrease signal range.
- DO NOT overtighten the mounting screws; the receiver housing could be warped and the weather seal damaged.
- The receiver range can vary from 50 to 100 feet depending upon weather, topography, and external interference.

FCC Regulation
This device complies with FCC rules Part 15. Operation is subject to the following conditions:
1. This device may not cause harmful interference.
2. This device must accept an interference that may cause undesired operation.

Transmitter distance may vary due to circumstances beyond our control. **NOTE:** The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user’s authority to operate the equipment.
DIP Switch Settings for Dual Gates

Step 26
The four control board DIP switches match the openers with the type of gate on which they are installed. For example, a dual gate may pull-to-open or push-to-open. Prior to packaging, the Mighty Mule Gate Opener® control board was configured for a single swing gate that pulls-to-open (opens into the property). You must adjust the DIP switches so the control board will recognize and activate both openers. The DIP switches must also be adjusted to control the order in which your dual gate leaves open and close ("gate sequencing"). If you do not adjust the DIP switches, your Mighty Mule Gate Opener® may not function correctly.

NOTE: To change the DIP switch settings, you must turn the control box power switch OFF; move the switch; then turn the power back ON. Use a small screwdriver to move the switches.

PULL/PUSH: Set to PULL for swing gates that pull-to-open [factory setting]; PUSH for swing gates that push-to-open (see Push to Open Installation on page 32). NOTE: The direction a gate opens is determined by standing inside the fenced property and facing toward the gate.

SNGL/DUAL: Set to SNGL for a single gate leaf [factory setting]; DUAL for dual gate leaves.
Move this DIP switch to DUAL (see illustration at right). If this DIP switch is set to SNGL, the opener connected to the SECOND OPERATOR terminal block will not function.

SEQ1: Controls the order of operation for dual gate leaves.
(the factory setting is OFF).
SEQ2: Controls the order of operation for dual gate leaves.
(the factory setting is OFF).

You determined the opening and closing order of your gate leaves when you mounted the positive stop plates on your gate. Review the Installation of the Positive Stops section on page 17 before setting the SEQ1 and SEQ2 DIP switches.

PLEASE NOTE: The terms "FIRST OPERATOR" and "SECOND OPERATOR" refer to a unit wired to the terminal block of the same name.
DIP Switch Settings for Gate Sequencing

NOTE: This is the setting you need to use with CLOSED POSITION STOP PLATES and/or LOCK

FIRST OPERATOR OPENS FIRST,
SECOND OPERATOR Closes FIRST

SEQ1 = OFF  SEQ2 = ON

If SEQ1 is set to OFF, and SEQ2 is set to ON, the FIRST OPERATOR will open first, and the SECOND OPERATOR will close first.

NOTE: This setting will work if you are using CLOSED POSITION STOP PLATES but WILL NOT work if you are using a LOCK

BOTH OPERATORS OPEN SIMULTANEOUSLY
SECOND OPERATOR CLOSES FIRST

SEQ1 = OFF  SEQ2 = OFF  (factory setting)

If both SEQ1 and SEQ2 are set to OFF, the FIRST OPERATOR and SECOND OPERATOR open simultaneously. The SECOND OPERATOR will close first.

NOTE: This setting can not be used if you are using CLOSED POSITION STOP PLATES or a LOCK

BOTH OPERATORS OPEN SIMULTANEOUSLY
BOTH OPERATORS CLOSES SIMULTANEOUSLY

SEQ1 = ON  SEQ2 = OFF

If SEQ1 is set to ON, and SEQ2 is set to OFF, the FIRST OPERATOR and SECOND OPERATOR open and close simultaneously.

NOTE: This setting can not be used if you are using CLOSED POSITION STOP PLATES or a LOCK

FIRST OPERATOR OPENS FIRST,
FIRST OPERATOR CLOSES FIRST

SEQ1 = ON  SEQ2 = ON

If SEQ1 is set to ON, and SEQ2 is set to ON, The FIRST OPERATOR opens and closes first.

Replace the control box cover and fasten it with (4) screws. Turn the control box power switch ON. The system will energize in approximately 15 seconds.
Potentiometer Settings

The three (3) potentiometers on the control board operate like a volume control on a radio. They control the auto close timer, inertia, and obstruction sensitivity of the opener. Use a small screwdriver to turn the arrow in the center of the potentiometer. Clockwise rotation increases the setting (MAX). Counterclockwise rotation decreases the setting (MIN).

**AUTO CLOSE** (auto close timer): Determines how long the gate will remain open before it automatically closes. The limits are **OFF** to 120 seconds. The factory setting is **OFF**.

**INERTIA**: Fine tunes obstruction sensitivity in the opening and closing modes. When INERTIA is set to **MIN** the opener will obstruct *quickly* (i.e., will attempt to push against an obstruction briefly); when set to **MAX**, the opener will obstruct *slowly* (i.e., will push against an obstruction for a longer period). The factory setting is **MIN**.

**OBSTRUCT SENS.** (obstruction sensitivity): Determines the amount of force exerted by the gate on an obstruction before the opener stops and reverses. The gate will exert *minimum force* before obstructing when set to **MIN**. When set to **MAX**, the opener will exert *maximum force* before obstructing (i.e., the opener will require greater resistance before stopping and reversing). The factory setting is **MIN**.

**READ WARNING BELOW!**

**NOTE:** Heavy gates and gates with high wind resistance *may* require the **OBSTRUCT SENS** and **INERTIA** potentiometer to be set closer to **MAX** to prevent the opener from obstructing. Keep in mind, however, that while you must determine the best setting for *smooth* gate operation, you must ALSO determine the lowest possible setting for *safe* gate operation.

---

**ALWAYS KEEP SAFETY AT THE TOP OF YOUR LIST WHEN ADJUSTING OR SERVICING YOUR AUTOMATIC GATE OPENER!**

---

⚠️ **WARNING!** ⚠️

All three potentiometers were set to minimum at the factory. The **OBSTRUCT SENS.** potentiometer MUST be adjusted above the factory setting for your Mighty Mule Gate Opener® to function properly. If the potentiometer is left at **MIN**, your gate opener may "obstruct" (i.e., stop and reverse) as soon as it is activated.

BE SURE TO PROPERLY RETEST THE GATE OPENER AFTER MAKING ANY ADJUSTMENTS; FAILURE TO DO SO MAY RESULT IN SERIOUS INJURY OR DEATH!
Setting the Closed Positions

HINT: The easiest way to make sure your dual gate closes fully is to set the closed position for each gate leaf one at a time. Set the closed position for the SLAVE gate.

Step 27
Carefully insert the power cable plug (of the SLAVE power cable) into the coupling at the rear of the opener. Turn the plug until it aligns with the pins in the coupling. Push the plug into the coupling until it stops. Finger tighten the sleeve nut to lock the plug into position.

Step 28
Reattach front mount to gate bracket using a clevis pin, washer, and hairpin clip. Press the transmitter button to activate the opener and determine the degree of gate closure. Initially, the push-pull tube will extend only 7-1/2” until the stroke adjustment knob is set (see below right). The maximum extension of the push-pull tube is 11 1/2”.

Step 29
To increase the degree of gate closure, loosen the stroke adjustment knob on the bottom of the opener housing and move it approximately 1/8” toward the gate bracket (see Fig. A). Finger tighten the knob (DO NOT USE PLIERS OR OTHER TOOLS TO TIGHTEN KNOB). Press the transmitter button to check your adjustment. To decrease the degree of gate closure, move the stroke adjustment knob away from the gate bracket (see Fig. B).

Step 30
Repeat the procedure in Step 27 until the gate closes firmly as the opener motor shuts down. Each time you adjust the knob, finger tighten it before pressing the transmitter button to check your adjustment.

⚠️ If the push-pull tube has been extended too far (i.e., if the knob is too close to the gate bracket), the gate will immediately reverse and open after closing. When the knob setting is correct, the gate will close firmly, but not sharply, against the positive stop plate. The motor will run for one-half second after the gate closes against the stop plate. If the motor continues to run for more than one second, the push-pull tube is overextended and further adjustment is necessary. If the motor strains too long against the stop plate, the fuse on the control board (above OPERATOR terminal) will be blown. This blade-style 15 ampere fuse (sold by most automotive supply stores) can be easily replaced. NEVER use a fuse rated higher than 15 amperes!

Step 31
Turn the control box power switch OFF. Disconnect the power cable plug from the coupling of the SLAVE operator with the gate in the fully closed position (do not disconnect the stripped ends on the power cable from the SECOND OPERATOR terminal block).

Step 32
Repeat Step 25 through Step 28 to connect the 4-1/2 foot power cable and set the closed position for the MASTER gate leaf. After you have set the closed position for the MASTER gate leaf, bury the PVC conduit and use the appropriate material to patch the slot in the driveway.

Step 33
Turn the control box OFF and reconnect the power cable plug and the SLAVE operator. Turn the control box ON and retest the stroke adjustment and sequencing of your dual gate with both openers activated. Make fine adjustments to the stroke knob position and set the SEQ1 and SEQ2 DIP switches if necessary. NOTE: Only make changes to the DIP Switches when the Control Box is turned OFF.
Powering the System
Installation of the Transformer

IMPORTANT:

- The transformer is designed and intended for indoor use. If the transformer can be plugged only into an outside electrical outlet, a weatherproof cover or housing (available at local electrical supply stores) must be used.

- All low voltage wire used with the Mighty Mule Gate Opener® must be 16 gauge dual conductor, multi-stranded, direct burial wire (see page 27 and the Accessory Catalog). Do not run more than 1000 feet of wire.

- If your gate is more than 1000 ft. from an ac power source, you will need to use at least two 5 watt Solar Panel to charge the battery (see Accessory Catalog). Refer to the Solar Panels and Gate Activity chart below.

Solar Panels and Gate Activity

The table and map (at right) illustrate the maximum number of gate cycles to expect per day in a particular area when using two to three GTO 5 watt solar panels (see Accessory Catalog). The figures shown are for winter (minimum sunlight) and do not account for the use of any accessory items. Accessories connected to your system will draw additional power from the battery.

NOTE: A maximum of three 5 W solar panels can be connected to the Mighty Mule Gate Opener®.

You must connect at LEAST two panels to adequately charge your dual gate opener system. Consult Solar Panel Installation Instructions.

Step 34
Make sure the power switch is OFF before proceeding to the next step.

Step 35
Select the electrical outlet into which you will plug the transformer. Measure the distance from this outlet to the control box following the path where the wire will be laid.
Step 36
Lay the measured length of low voltage wire in a trench following a path from the selected electrical outlet to the control box. Wires coming up from the ground should be run through PVC conduit to protect them from lawn mower blades, weed eaters, and grazing animals. Be sure to bury the wire laid in the trench.

Step 37
Feed the low voltage wires upward through the strain relief opening on the lower left of the control box. Pull 6” to 8” of wire into the control box and tighten the strain relief screw to secure the wires.

Step 38:
Strip 3/16” of insulation from the ends of the low voltage wire and twist tightly. Attach these ends to the 18VAC terminals located on the POWER IN terminal block (see illustration at right). Be certain not to let the exposed wires touch each other!

Insert one transformer wire into an 18VAC terminal. Insert the other transformer wire into the remaining 18VAC terminal. The transformer wires can be connected to the 18VAC terminals regardless of color.

Tighten set screws against exposed end of wires. A dab of household petroleum jelly on each terminal will help prevent corrosion.

**WARNING! DO NOT PLUG THE TRANSFORMER INTO AN OUTLET DURING THIS STEP! THE TRANSFORMER MUST ONLY BE PLUGGED INTO AN OUTLET DURING STEP 40!**
**Step 39**
Strap 1/2” of insulation from the ends of the low voltage wire. Attach these stripped ends to the transformer terminals; **red wire to RED, black wire to BLK**.

A dab of household petroleum jelly on each terminal will help prevent corrosion.

We suggest crimping a spade tongue terminal (*not provided*) to the end of each wire before attaching it to the transformer.

**Make sure the exposed wires do not touch each other!**

**Step 40**
Plug the transformer into the electrical outlet.
(Use of a surge protector with the transformer is strongly recommended.)

**HINT:** Keep a few mothballs in the control box to discourage insects from entering it and damaging the control board.

**Step 41**
Turn control box **ON**.
Setting Your Personal Transmitter Code

All GTO transmitters are set to a standard code at the factory and are ready to operate your Mighty Mule Gate Opener®. For your safety and security, however, we strongly recommend that you replace the factory setting with your own personal code. Follow the directions below:

1. Remove the Transmitter Cover

Grasp the sides of the access cover and slide it away from the transmitter button (see illustration). When the access cover is removed, the battery and the DIP switches will be exposed. To set a new code, use a small screwdriver to move the switches.

2. Set the transmitter DIP Switches

There are nine (9) transmitter DIP switches; each can be placed in one of three different positions (+, 0, –). DO NOT set all the switches in the same position, such as all +, all 0, or all –. Once the DIP switches have been set to a personal code, replace and close the access cover.

WARNING: No other adjustments should be made inside the transmitter.

3. “Teach” the New Code to Control Board Memory

A. Turn control box power switch OFF.
B. Un螺丝 and remove the control box cover.
C. Press and hold the LEARN button on the control board, and turn the power switch ON. Release LEARN button. Wait 15 seconds for the receiver to charge.
D. Press and hold transmitter button until the red STATUS LED comes ON.
E. Release transmitter button. The new code is stored in control board memory.
Connecting Additional Safety Devices

Although GTO strongly recommends the use of additional safety devices, we do not endorse any specific brand names. Only use products that are certified and listed to be in compliance with UL (United Laboratories) and national and regional safety codes.

Call GTO Sales at 1-800-543-4283 for information on compatible products for your specific application.

The Mighty Mule Gate Opener® is equipped with built-in obstruction sensitivity. The opener is designed to stop and reverse the gate approximately 2 seconds when it comes in contact with an obstruction. However, obstruction sensitivity, even when properly adjusted, may not be sensitive enough to prevent bodily injury in some circumstances. To augment your protection against entrapment, GTO suggests using safety edge sensors or photoelectric sensors. When installed, safety edge sensors (or photoelectric sensors) must be mounted in compliance with UL 325, Underwriters Laboratories safety standard for gate openers. Review page 4 for information about mounting requirements for safety edges (“contact sensors”) and photoelectric sensors ("non-contact sensors").

Refer to the sensor manufacturer’s instructions for information about installing these devices on a vehicular gate.

⚠️ Make sure the control box power switch is OFF before connecting safety device wiring to the terminal blocks.

Insert the safety device wires into the CLS EDG terminal on the FIRST OPERATOR terminal block for the gate closing mode. Connect the safety device ground wire to the GRN terminal. Connect the safety device wires for the gate opening mode to the OPN EDG terminal in the same manner.

Repeat the above procedure for the SECOND OPERATOR terminal block.

PLEASE NOTE: Safety edge sensors and photoelectric sensors are neither included with nor required for the Mighty Mule Gate Opener®.
Connecting Accessories

⚠️ Make sure the control box power switch is OFF before connecting accessories.

The ACCESSORY terminal block is the connection point for accessories such as keypads, push buttons, safety loops, intercoms, etc. The ACCESSORY terminal marked GRN (green) is the common ground for all accessories. GRN is paired with the terminals shown below when connecting accessories to the control board.

IMPORTANT: Make sure to twist the exposed wires tightly and insert them into the terminals without loose strands. Tighten the set screws against the exposed end of the wires. A dab of household petroleum jelly in each terminal will help prevent corrosion.

WHT (white) used with GRN (green):

Functions with a normally open contact. This is the most frequently used pairing for a doorbell button, keypad, or key switch.

- First contact will start the gate.
- Second contact will stop the gate.
- Third contact will reverse the gate.

NOTE: The system will not work with a lighted doorbell button!

BLU (blue) used with GRN (green):

Functions with a normally open contact. This pairing is typically used for free entry and free exit devices.

- First contact will open the gate.

NOTE: If the gate is in the open position and begins to close, the activation of the accessory device will reopen the gate. In communities where the use of an emergency entry device is mandatory, it should be connected to these terminals.

ORG (orange) used with GRN (green):

Functions with a normally open contact. This pairing is frequently used for safety loops.

This connection will not open your gate. The safety loop will activate only while the gate is in use. When using this combination, the gate will remain open or reopen if it is closing.
Determining The Mounting Position of The Post Bracket Assembly

Swinging gates shall not open into public access areas!

A "Push-to-Open" dual gate opens out from the property. Two (2) Push-to-Open brackets are required for this type of installation (see Accessory Catalog).

The opener is installed while the gate leaf is in the closed position.

Step PTO-1:
With the gate leaf closed, adjust the post bracket assembly and the gate bracket until the opener is level. While holding the opener level, use C-clamps to temporarily keep the post bracket assembly and gate bracket in their respective positions on the fence post and gate.

Step PTO-2:
While gate leaf is closed, stand inside the property next to the fence post. Using the setback template (insert) measure 4 1/2" back from center of gate hinge, then make a 90° angle toward the gate and measure 4 1/2". This is the point where either one of the holes at the end of the post pivot bracket should be. You will need to rotate the post pivot bracket or the entire post bracket assembly to align it with the square angle of the template.

NOTE: If you move the post pivot bracket, be sure one of the post bracket holes is aligned with the rest of the assembly (the center hole should already have a bolt through it). The post pivot bracket can be flipped over to give more position options.

After verifying that you have complied with the 4 1/2" x 4 1/2" setback, insert the 5/16" x 1 3/4" bolt through the aligned holes of the post bracket and post pivot bracket and fasten it with the 5/16" washer and nut.
Step PTO-3:
With the gate leaf in the **fully closed position** and the opener retracted, swing the opener to the gate. Mark reference points for bolt holes on gate cross member through middle of gate bracket slots. The opener must be level. (Some vertical adjustment is possible by sliding the post bracket assembly up and down.) Drill 3/8” holes into the gate cross member as marked. Fasten gate bracket to cross member using (2) 3/8” x 3” bolts, washers, lock washers, and nuts. Attach the opener to the post bracket assembly and gate bracket using clevis pins, washers, and hairpins clips.

Step PTO-4:
Make sure the control box power switch is **OFF**. Use a small screwdriver to move the **PULL / PUSH** DIP switch from the factory setting to **PUSH**. Replace control box cover. Turn power switch **ON**. The control board is now configured to push the gates open.

Step PTO-5:
**HINT:** Set the open position for the gate leaves **one at a time**. Set the open position of the leaf that opens first—**FIRST** (disconnect power cable to the other opener).

Press the transmitter to activate the opener and determine the degree of gate opening. Initially, the push-pull tube will extend only 7-1/2” until it is adjusted (**see below right**). The maximum extension of opener is 11 1/2”.

Step PTO-6:
To **increase** the degree of gate leaf opening, loosen the **stroke adjustment knob** on the bottom of the opener housing and move it about 1/8” toward the gate bracket (**see Fig. A**). **Finger tighten the knob—DO NOT USE PLIERS OR OTHER TOOLS TO TIGHTEN KNOB.** Press the transmitter to check your adjustment. To **decrease** the degree of gate opening, move the stroke adjustment knob away from the gate bracket (**see Fig B**).

Step PTO-7:
Repeat the procedure in step PTO-6 until the gate stops firmly (but not sharply) against the open position stop plate. The motor will continue to run for one-half second after the gate opens against the stop plate. If the motor continues to run for more than one second, the push-pull tube is overextended and further adjustment is necessary. If the motor strains too long against the stop plate, the fuse on the control board (above **FIRST OPERATOR** terminal) may be blown. This blade-style 15 ampere fuse (sold by most automotive supply stores) can be easily replaced. **NEVER use a fuse rated higher than 15 amperes!**

**NOTE:** Each time you adjust the knob, finger tighten it before pressing the transmitter button to check your adjustment.
If your gate openers do not function properly after installation, use this guide before calling the GTO Service Department.

- On all gate leaves weighing 250 lb. or more, routinely grease the ball bearing hinges at least 4 times a year; more frequently if the gates are near a coastal area.

- Keeping a few mothballs in the control box will discourage insects from entering it and damaging the control board.

- Clean the push-pull tubes with a soft, dry cloth and apply silicone spray to them at least once per month.

### If the Opener Does Not Work

#### Check the Green LED on the Control Board:

**IF THE LED IS OFF:** This condition indicates a transformer power failure.

1. Test the transformer for voltage with a voltmeter. The acceptable range can be found in the VOLTAGE LIMITS chart on the next page. If the transformer test shows no voltage, then test the electrical outlet for voltage. If the outlet test shows voltage, then the transformer is dead and must be replaced. Allow the new transformer 12 hours to charge the battery before using the gate openers.

2. If the transformer test shows voltage, check the POWER IN terminal block on the control board for voltage. If the terminal block shows no voltage, look for broken or spliced wires.

#### Check the Red STATUS LED on the Control Board:

**IF THE LED IS ON:** This condition indicates the control board is powered up.

1. Replace the transmitter battery with a fresh one.
2. Verify that the power cables are securely connected.
3. Replace the control board fuses if they are blown (15 ampere fuses only - DO NOT USE HIGHER RATED FUSES!).

**IF THE LED IS OFF:**

1. Make sure the ON / OFF switch at the bottom of the control box is set to ON.
2. Check all connections for looseness and corrosion.
3. Make sure the battery cables are connected.

**IF THE LED IS FLASHING:**

The system may be in a condition known as "low voltage lockout" (i.e., inadequate voltage supplied for the gate opener to function).

1. Test (using a voltmeter) the voltage output of the transformer (18.0 to 22.0 VAC) or solar panel (18.0 to 22.0 VDC) at the control board power terminal block.
   
   A. If the voltage is low or not reading, load test the battery at a electronics store and call your dealer for a replacement battery if necessary.
   
   B. If the voltage is low or not reading, test the transformer and electrical outlet. Replace the transformer if necessary and let the battery recharge for 12 hours before using the gate opener.
   
   C. Check the control board for damage or corroded connections.
   
   D. Make sure that telephone or solid core wire is not being used to connect the transformer to the control board.
The Gate CLOSES Then Opens Again on its Own:
1. Check the position of the mounting brackets and readjust if necessary.
2. Check the gate for binding or hinge damage.
3. Check the position of the stroke adjustment knob.

The Gate OPENS Then Closes Again on its Own:
1. Check the position of the mounting brackets and readjust if necessary.
2. Check the gate for binding or hinge damage.
3. Check the position of the stroke adjustment knob.

One Gate OPENS and the Second Gate Doesn't in a DUAL Gate Application:
1. Check the DIP switches on the control board and be sure the SNGL/DUAL is set to DUAL.
2. Check the Opener Power Cable for proper connection.
3. Check the fuse.

Warranty and Repair Service

If your Mighty Mule Gate Opener® is not operating properly, please follow the steps below:

1. First use the procedures found in the Maintenance & Troubleshooting Guide (see page 34).

2. If you are unable to solve the problem, call the GTO Service Department at (800) 543-1236, or (850) 575-4144. Refer to the serial number (located on the control box cover) and date of purchase when calling for assistance.

3. If repair or replacement of your gate opener is necessary, the Service Department will assign a Return Goods Authorization (RGA) number to you.

4. Securely pack the component(s) authorized for return to the factory. Write the RGA number issued to you on the outside of the package in LARGE BOLD PRINT. Ship the package(s) freight prepaid to:
   GTO, Inc., 3121 Hartsfield Road, Tallahassee, Florida, USA 32303.

NOTE: Products returned to GTO without a Return Goods Authorization (RGA) number in LARGE BOLD PRINT on the outside of the package WILL NOT be accepted. Also, items returned to GTO freight collect WILL NOT be accepted.

One Year Limited Warranty

Your Mighty Mule Gate Opener® is warranted by the manufacturer against defects in materials and manufacturer workmanship for a period of one (1) year from date of purchase, provided the recommended installation procedures have been followed.

In the case of product failure due to defective material or manufacturer workmanship within the one (1) year warranty period, the opener will be repaired or replaced (at the manufacturer's option) at no charge to the customer, if returned freight prepaid to GTO, Inc., 3121 Hartsfield Road, Tallahassee, Florida, USA 32303. IMPORTANT: Call (850) 575-4144 or Fax (850) 575-8950 for a Return Goods Authorization (RGA) number before returning item(s) to the factory. Products shipped to the factory without an RGA number will not be accepted. Replacement or repaired parts are covered by this warranty for the remainder of the one (1) year warranty period or six (6) months, whichever is greater.

The manufacturer will not be responsible for any damage or cost incurred in the removal of the defective parts for repair, or for the reinstallation of those parts after repair. This warranty shall be considered void if damage to the product was due to improper installation or use, tampering, connection to an improper power source, or if damage was caused by lightning, wind, fire, flood, insects, or other natural agent. This warranty gives you specific legal rights, and you may also have other rights which may vary from state to state. This warranty is in lieu of all other warranties, either expressed or implied. NOTE: Verification of the warranty period requires copies of receipts or other proof of purchase. Please retain these records.

After the one (1) year warranty period expires, GTO (or one of its authorized service centers) will perform necessary repairs for a nominal fee. Call GTO at (800) 543-1236 or (850) 575-4144 for more information.

Remember to keep all receipts for proof of purchase.
Column Installation Information

IF THESE OPENERS WILL BE USED WITH GATES THAT ARE MOUNTED ON MASONRY, BRICK, OR ROCK (etc.) COLUMNS:

READ THE FOLLOWING CAREFULLY BEFORE PROCEEDING

Attaching a gate opener to a gate mounted on a masonry column requires special procedures.

Here's how to check your installation to minimize problems:

Open the gate to the 90° position, then measure the distance between the back of the gate and the face of the column. If there is at least a 6 1/4" clearance, you may not have to make any special modifications. However, you must measure the post pivot bracket position using 4 1/2" x 4 1/2" setback, as described on page 14 of this manual, to verify that the gate hinge sits far enough from the column to give your installation the proper setback distance.

If you do not have the proper clearance or setback distance, the opener may operate the gate for a while, but eventually the unit will become nonfunctional. To prevent this problem, we suggest the following installation method:

A. The simplest solution is to install the opener in a push-to-open configuration (requires Push-To-Open Brackets, see Accessory Catalog). The crucial 4 1/2" setback is easier to achieve and clearance is no longer a problem, since the opener will be pushing the gate away from the column instead of pulling it toward the column. It is recommended that you place a steel plate between the opener mounting brackets and masonry surface for additional strength.

B. If a push-to-open installation is impossible due to traffic hazards, terrain, etc., another option is to re-hang the gate. You may hang it on a post, either in the center of the column or at the back corner, or move the gate to the back corner of the columns.

C. The most difficult solution is to cut a notch in the column to accommodate the opener and power cable. This job is NOT for the inexperienced!

Because of the difficulty associated with column installations, we STRONGLY advise you to call the GTO Service Department at (800) 543-1236 or (850) 575-4144 for assistance prior to your installation.
**Automatic Gate Lock Pull-to-Open (FM143)**
A MUST for securing the gate against forced entry or exit. Solenoid driven, plated steel bolt lock with a zinc plated steel housing. The horizontal electronic lock is used with the Mighty Mule® system for maximum stability and security. Recommended for gates over 8 feet long or where high winds are common.

**Solar Panel (FM121)** (has a 2 year warranty)
The Solar Panel is a solar powered battery charger for use with the Mighty Mule® gate opener system. Particularly suited for remote installations, the Solar Panel comes with tubular steel support, mounting clips, wire connectors, and 8 ft. of low voltage wire (for longer length wire, see RB509 below). The Mighty Mule® control board has clearly labeled terminal connections for easy installation of the Solar Panel. Installation in some regions of the world may require dual solar panels for adequate charging power.

**GTO Digital Keypad (FM137)**
The specially designed digital keypad can be easily installed as a wireless or wired keypad. It can be programmed to use up to fifteen different personal identification number (PIN) codes. Each code is face programmable with additional security features built in. Requires 3 AA batteries (not included).

**Mighty Mule Entry Transmitter (FM135)**
The Mighty Mule® entry transmitter, with adjustable code settings, is standard equipment with Mighty Mule® systems. Battery included.

**Push Button (Doorbell) Control (FM132)**
Unlighted doorbell button for remote entry or exit control. Connects directly to the control board and uses 16 gauge, multi-stranded low voltage wire (not included).

**Pin Lock (FM133)**
The Pin Lock substitutes for the clevis pin at either or both mounting points of the opener. Helps prevent theft of the opener from the gate, while allowing quick release of the opener.

**Key Chain Mini Transmitter (FM134)**
The Key Chain Mini Transmitter is a miniature version of the Mighty Mule® entry transmitter and has the same adjustable code settings. Battery included.
**Low Voltage Wire (RB509)**

The 16 gauge, multi-stranded, dual conductor Low Voltage Wire connects the AC powered transformer or the solar powered battery charger (Solar Panel) to the control board. Also used for the connection of accessories, such as locks, keypads, push buttons and other wired control devices. This specially designed wire is UV treated, PVC coated and ready for direct burial. Available in 1000' rolls or special lengths.

---

**Gate Opening Sensor (FM138)**

The Gate Opening Sensor is designed for residential and agricultural applications and is compatible with the Mighty Mule automatic gate opener models. The Gate Opening Sensor is an electromagnetic sensor, which offers 'hands free' operation of the Mighty Mule Automatic Gate Opener with a 12 ft. radius of detection of vehicles in motion.

---

**The Following Accessories Are Available Through Your Retail Store's Special Order Desk.**

**Garage Door Receiver (RB709)**

The Garage Door Receiver allows you to use the same Mighty Mule® entry transmitter (see dual and triple transmitters) to operate your gate opener and your garage door opener. Compatible with most garage door openers.

**Dual Transmitter (RB742)**

The Dual Transmitter is a two button transmitter for remote control of two separate gate openers, or a gate opener and garage door opener (see Garage Door Receiver). Battery included.

**Triple Transmitter (RB743)**

The Triple Transmitter is a three button transmitter for remote control of three separate gate openers and/or garage door openers (see Garage Door Receiver). Battery included.

**Push To Open Bracket (348IH)**

Required when the Mighty Mule Gate Opener® must push the gate open, such as on a sloping driveway, or where space prevents gate from being pulled open.

**Column Mount Lock Receiver (433IH)**

For mounting the Automatic Gate Lock (FM143) on brick columns, walls, or for other applications with limited space between gate and post.

**Power Cables**

The AW201 four and one-half foot power cable is included with Mighty Mule® gate opener systems.

The AW202, AC108, and AC109 twenty-five, thirty-five, and forty foot (respectively) power cables allow you to mount the control box in a remote location.

---

**If you have a question about any special order item, just call 1-800-543-GATE!**
The Following Replacement Parts Are Available Through Your Retail Store’s Special Order Desk.

**Replacement Battery (RB500)**
Standard 12 volt, 7.0 ampere-hour, maintenance-free battery for the Mighty Mule® gate opener. Only this battery is approved for use with the Mighty Mule®. Battery life 3 to 5 years.

**26 Amp Hour Battery Kit (FB296)**
This large 12 volt, 26 ampere-hour, maintenance-free battery is for the Mighty Mule gate operators. It will supply additional power for increasing the number of open and close cycles. The kit comes with the battery and wiring harness for easy installation. Battery life 3 to 5 years.

**Replacement Transformer (RB566)**
Standard 18 volt AC transformer for maintaining the battery included with the Mighty Mule® gate opener. This is the only transformer approved for use with the Mighty Mule®.

---

**Mighty Mule® Limited One Year Warranty:**

GTO, Inc., gate openers and accessories are warranted by the manufacturer against defects in materials and manufacturer workmanship for a period of one (1) year from date of purchase, provided the recommended installation procedures have been followed.

In the case of product failure due to defective material or manufacturer workmanship within the one (1) year warranty period, the product will be repaired or replaced (at the manufacturer’s option) at no charge to the customer, if returned freight prepaid to GTO, Inc., 3121 Hartsfield Road, Tallahassee, Florida, USA 32303. **IMPORTANT:** Call (850) 575-4144 or Fax (850) 575-8950 for a Return Goods Authorization (RGA) number before returning accessory to factory. Products received at the factory without an RGA number will not be accepted. Replacement or repaired parts are covered by this warranty for the remainder of the one (1) year warranty period or six (6) months, whichever is greater. GTO, Inc. will pay the shipping charges (equal to United Parcel Service GROUND rate) for return to the owner of items repaired under warranty.

The manufacturer will not be responsible for any charges or damages incurred in the removal of the defective parts for repair, or for the reinstallation of those parts after repair. This warranty shall be considered void if damage to the product(s) was due to improper installation or use, connection to an improper power source, or if damage was caused by lightning, wind, fire, flood, insects or other natural agent.

After the one (1) year warranty period, GTO, Inc., or one of its authorized service centers will make any necessary repairs for a nominal fee. Call GTO at (800) 543-1236 for more information. This warranty gives you specific legal rights, and you may also have other rights which may vary from state to state. This warranty is in lieu of all other warranties, expressed or implied. **NOTE:** Verification of the warranty period requires copies of receipts or other proof of purchase. Please retain these records.
